Art Unit: 2665

1. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
  - (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
  - (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
  - (d) THE NAMES OF THE PARTIES TO A JOINT RESEARCH AGREEMENT
  - (e) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) Or  
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
  - (f) BACKGROUND OF THE INVENTION.
    - (1) Field of the Invention.
    - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
  - (g) BRIEF SUMMARY OF THE INVENTION.
  - (h) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
  - (i) DETAILED DESCRIPTION OF THE INVENTION.
  - (j) CLAIM OR CLAIMS (commencing on a separate sheet).
  - (k) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
  - (l) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).
2. The drawing is objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the claimed packet network as in claims 1, 9, 17 and 18, terminal as in claim 17, and access router apparatus as in claim 18, all must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Art Unit: 2665

The drawing is further objected to because all blocks in Fig. 1 should be labeled with descriptive legends known or recognized in the art. Correction is required.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

3. The disclosure is objected to because of the following informalities:

In the specification, pages 1-3, it is improper to incorporate claim numbers into the specification since it is unknown as to how many claims will remain and what each claim will look like at the end of the prosecution for the instant application.

Appropriate correction is required.

4. Claims 1-18 are rejected under 35 U.S.C. 112, first paragraph, as based on a disclosure which is not enabling. The marker device comprises congestion checking device, memory, token

Art Unit: 2665

generation rate device, token generation rate memory, token bucket marker device, and ME device are critical or essential to the practice of the invention, but not included in the claim(s) is not enabled by the disclosure. See *In re Mayhew*, 527 F.2d 1229, 188 USPQ 356 (CCPA 1976). To be more specific, in all claims, only a marker device or functions performed by the marker device were recited in the claims, which renders the claims not enabled by the disclosure.

5. Claims 9-18 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 9-16 are rejected as vague and indefinite since each claim recites only a single means (i.e. marker device) and thus encompasses all possible means for performing a desired function. See *Ex parte Bullock*, 1907 C.D. 93; 127 O.G. 1580.

Claims 17 and 18 are rejected as vague and indefinite since it is unclear as to what is intended to be the claim limitation by reciting "said marker device is further adapted in accordance to claim 9"

6. Due to the nature of 112, 1<sup>st</sup> and 2<sup>nd</sup> paragraph problems as indicated above, there is no prior art rejection can be applied at this time.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kompella et al., Marin et al., Nattkemper et al., Elwalid et al., Soirinsuo et al., Haddock et al., McConnell et al., Berger et al., Hadi Salim et al., Michiel, and Anderlind are all cited to show the common feature of data flow/congestion control utilizing quality of service parameters similar to the claimed invention.
